

FIEC ELEVATOR

Staff App Manual

Version: Trial / Staff Review

App URL: <https://elevator-app-peach.vercel.app>

Login: **Tap "Enter App!" — no password needed**

How to Log In

Who	How
Staff (trial)	Open the app! tap "Enter App!" — no password needed
Admin / Owner	Use your own email and password

What This App Does

The FIEC Elevator app manages the full lifecycle of every elevator project — from the first sales call all the way to handover and ongoing maintenance. It replaces spreadsheets, group chats, and sticky notes with one system everyone can see.

Who Uses It

Role	What They Can See
Admin (Owner / Boss)	Everything — including prices, contracts, finance, invoices
Operations Staff	Projects, jobs, breakdowns, customers — no prices or billing

The Big Picture — How a Project Flows

```
New Client Inquiry
  |
Add Customer
  |
Start Pipeline <--- 12-step checklist (drawings -> payment -> shipping -> install -> handover)
  |
Step 5 Complete (Payment to Supplier)
  |
Auto-added to Project Status <--- Team tracks progress here daily
  |
Project Complete -> Handover Documents generated
  |
Maintenance Contract (AMC) created
  |
Monthly Service Visits scheduled
  |
Breakdown Calls logged if issues arise
```

Module Guide

1. Dashboard

Who uses it: Everyone, every day

What it shows:

- Active alerts (breakdowns, stalled projects, payments due)
- Needs Attention items — things that need someone to act
- Recently confirmed items — what got resolved

How to use:

- Check this first thing every morning
- Add action items for the team using the text box
- Click the bell (top of sidebar) for all alerts

2. Customers

Who uses it: Admin, Operations

What it does: Stores all client information — name, address, contact, buildings, elevators

When to use:

- When a new client signs a contract — Add them here first
- Before starting a pipeline or maintenance contract, the customer must exist

3. New Installations (Pipeline)

Who uses it: Admin starts it, Operations updates steps

What it does: Tracks a new elevator installation through 12 steps from award to handover

The 12 Pipeline Steps

Step	Name	Notes
1	Project Awarded	Admin confirms
2	Shop Drawings Prepared	Upload drawings file
3	Client Signs Drawings	Upload signed copy
4	Engineer Approval	Upload approval
5	Payment to Supplier	Triggers Project Status entry
6	Production Started	Enter expected end date
7	Production Monitoring	Checkpoint
8	Shipment	Enter tracking number
9	Customs & Arrival	Confirm arrival
10	Installation	Confirm on site
11	Testing	Upload test results
12	Turnover to Client	Final handover

Rules:

- Each step must be completed before the next unlocks
- Steps that need a file — you must upload the document
- Admin can override a locked step if urgent (logged automatically)
- Only the assigned role can complete each step

4. Project Status

Who uses it: Operations team daily

What it does: Shows all active installation projects and their current status

Status	Meaning
On-Going Production	Elevator being manufactured
On-Going Installation	On-site installation in progress
For Permits	Waiting for government permits
For Inspection	Awaiting inspector visit
For Handover	Ready to hand to client
Handed Over	Complete
On Hold	Paused for any reason
Breakdown	Emergency issue on site

How to use:

- Update the status whenever something changes
- Set a Next Action + due date so the team knows what happens next
- Assign a PIC (Person In Charge) to every project
- Use the Timeline view to see all projects on a calendar

5. Maintenance Contracts (AMC)

AMC = Annual Maintenance Contract

Who uses it: Admin manages, Operations views

What it does: Stores all maintenance agreements — how often visits happen, how much it costs, when it expires

Renewal Tracking — when a contract is close to expiry (within 60 days), a Renewal Tracking panel appears. Update the status as you go:

Not started -> Client contacted -> In negotiation -> Proposal sent -> Renewed

AMC Billing: Go to AMC Billing in the sidebar to see which clients need to be billed this month. Mark each one as Billed then Paid.

6. Service Visits (Jobs)

Who uses it: Operations, Technicians

What it does: Logs every scheduled maintenance visit — who went, when, what was done

How to use:

- When a visit is scheduled, add a new job
- After the visit, mark it complete and add notes
- This feeds into the reports at end of month

7. Breakdown Calls

Who uses it: Everyone

What it does: Logs emergency breakdowns — which elevator, what happened, who responded

Priority levels:

- Critical — elevator stuck with passengers / hospital / fire escape
- High — elevator stopped, no passengers stuck
- Medium — partial issue, still running
- Low — minor complaint, cosmetic

How to use:

- Log it immediately when a client calls
- Assign to a technician
- Update status as it progresses: Open -> In Progress -> Resolved

8. Finance / Invoices / Reports

Who uses it: Admin only

What it does: Billing milestones, invoice tracking, revenue reports. These pages show a watermark and are access-logged for security.

9. Admin Audit

Who uses it: Admin only

What it does: Shows a log of who accessed sensitive pages, what changes were made to projects, and AMC activity. Use this to monitor staff activity.

How the Team Works Together

OWNER / ADMIN

- Approves pipeline steps (Step 1, 3, 11, 12)
- Sets contract amounts (hidden from staff)
- Handles finance, invoices, billing
- Monitors Admin Audit log
- Approves or denies deletion requests

OPERATIONS TEAM (Chel, Vic, Jose, Isza, Jonathan)

- Updates Project Status daily
- Completes pipeline steps assigned to them
- Logs service visits after each job
- Logs breakdown calls immediately
- Adds Needs Attention items on Dashboard

EVERYONE

- Checks Dashboard every morning
- Updates their assigned projects
- Adds comments and notes on any project

Notification Bell (Top of Sidebar)

The bell shows automatic alerts. Red number = alerts waiting.

Alert	What it means
Pre-Shipment Payment Due	A production project is past 23 days — client needs to pay
Deletion Requests	Staff asked to delete a project — boss approves or denies
No Update in 7+ Days	A project hasn't been touched — needs attention
Next Actions Due	Someone set a next action and it is past due
Warranty Expiring	Maintenance end date is within 7 days
AMC Expiring Soon	A maintenance contract expires within 30 days
AMC Renewal Needed	Contract expired, no renewal action taken

Common Tasks — Quick Reference

Task	Where to go
Add a new client	Customers -> New Customer
Start a new installation	New Installations -> Start Pipeline
Update a project status	Project Status -> click project -> change status
Log a breakdown	Breakdown Calls -> New Breakdown
Schedule a service visit	Service Visits -> New Job
Add a maintenance contract	Maintenance Contracts -> New Contract
Generate handover documents	Project Status -> project -> Handover Documents
Check who needs billing this month	AMC Billing (sidebar)
See all projects on a timeline	Project Status -> Timeline
Check what alerts are pending	Click the bell icon in the sidebar

TRIAL MODE NOTICE

During the staff review period:

- Project names are shown as "Project 0421" (real names hidden)
- Contact numbers show as "Hidden during trial"
- Document uploads in the pipeline are optional

These will all be restored when the app goes live.

Questions or issues? Contact the admin.

Do not delete records — use "Request Deletion" so the admin can approve.
